■ **THE FUTURE OF THE FIRM** ■

[illegible]

- [Download the full report](#)

1. **Identify the problem.** The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.

2. **Define the problem.** Once the problem is identified, it is important to define it clearly. This involves specifying the scope of the problem and the goals that need to be achieved.

3. **Generate hypotheses.** The next step is to generate hypotheses about the causes of the problem. This involves brainstorming potential causes and testing them against the evidence.

4. **Test the hypotheses.** Once hypotheses have been generated, they need to be tested. This involves collecting data and analyzing it to see if it supports or refutes the hypotheses.

5. **Draw conclusions.** Finally, once the hypotheses have been tested, conclusions need to be drawn. This involves summarizing the findings and making recommendations for future action.

- **Stressors** are external factors that cause stress.
- **Strains** are the negative effects of stress on the body.
- **Coping** is the process of dealing with stress.

For every  $\mathbb{R}$ -homomorphism  $\alpha: R \rightarrow R'$  we associate another map  $\alpha^*: \mathcal{A}(R) \rightarrow \mathcal{A}(R')$  and denote this mapping between  $\mathcal{A}$ -modules via pages 9 and 10 accordingly. Also, for any  $\mathcal{A}$ -module  $M$  we define its support by writing  $\text{supp } M := \{x \in \mathcal{A} \mid M_x \neq 0\}$  (see [1, p. 10]).
